

CLINICAL DIAGNOSIS REPORT

AI-Assisted Diagnostic Analysis & Decision Support System

Report ID:	2650bd43-5162-4425-97f6-3eb9b28d3b78	Date & Time:	2026-07-06 13:56:36
Diagnosis Mode:	Symptom Diagnosis	Model Used:	BioBERT
Inference Speed:	301.17 ms	Status:	Completed

Patient Case / Provided Input

I am experiencing itching, skin rash, nodal skin eruptions and dischromic patches.

Primary Diagnostic Analysis

PREDICTED CONDITION	MODEL CONFIDENCE SCORE
Fungal infection	99.79%

Differential Diagnosis Breakdown (Probability Index)

Rank	Diagnostic Indication / Disease	Probability Score
1	Fungal infection	99.79%
2	Acne	0.16%
3	Psoriasis	0.03%
4	Dimorphic hemmorhoids(piles)	0.00%
5	Chicken pox	0.00%

MEDICAL DISCLAIMER: This document contains analysis generated by an automated Artificial Intelligence (AI) deep learning diagnostic model. It is intended solely for general reference, research, and clinical decision support. This analysis does NOT constitute definitive medical advice, diagnostic conclusions, or a treatment plan. The prediction confidence scores represent pattern correlation levels, not clinical certainty. Any medical decisions, medication prescriptions, or diagnostic procedures must be reviewed and finalized by a licensed healthcare professional or medical doctor.
