## Primary Diagnostic Analysis

| PREDICTED CONDITION | MODEL CONFIDENCE SCORE |
|---------------------|------------------------|
| Normal              | 92.54%                 |

## Differential Diagnosis Breakdown (Probability Index)

| Rank | Diagnostic Indication / Disease | Probability Score |
|------|---------------------------------|-------------------|
| 1    | Normal                          | 92.54%            |
| 2    | Lung_Opacity                    | 5.83%             |
| 3    | COVID                           | 0.98%             |

**MEDICAL DISCLAIMER:** This document contains analysis generated by an automated Artificial Intelligence (AI) deep learning diagnostic model. It is intended solely for general reference, research, and clinical decision support. This analysis does NOT constitute definitive medical advice, diagnostic conclusions, or a treatment plan. The prediction confidence scores represent pattern correlation levels, not clinical certainty. Any medical decisions, medication prescriptions, or diagnostic procedures must be reviewed and finalized by a licensed healthcare professional or medical doctor.
